DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Dang et al. (US 5,757,594).

Dang teaches a system (fig. 1) comprising: a sensor module (IR sensor 156) for detecting when a first electronic device (24, fig. 8) coupled to an equipment rack is being slid out of said equipment rack, a locking module (70 controlled by 194) for preventing a second electronic device (next to 24, fig. 8) coupled to said equipment rack from being slid out of said equipment rack, and an electronic control module (16) coupled to said sensor module and said locking module (see figs. 9 and 10) (claims 8-9 and 15-16); wherein said sensor module is selected from an optical sensor, a proximity sensor, a mechanical switch, a mechanical sensor, an electro-mechanical sensor, an ultrasonic sensor, a hall-effect sensor, and a Linear Variable Differential Transformer (LVDT) (see col. 10, lines 16-19) (claims 10 and 17); wherein said locking module is selected from a solenoid, an electro-mechanical device, a solenoid capable of engaging and disengaging a pin or a latch, an electric motor capable of engaging and

Application/Control Number: 10/620,640 Page 3

Art Unit: 2835

disengaging a pin or a latch, solid state circuitry, and a magnetic latch (see col. 6, line 67 through col. 7, line 2) (claims 11 and 18); wherein said electronic control module is selected from a processor, a controller, a state machine, and a microprocessor (see col. 5, lines 18-20) (claims 12 and 19); wherein said sensor module also for detecting when said first electronic device has been slid back into said equipment rack (see col. 10, lines 16-19) (claim 13); wherein said electronic control module controls said locking module based on electronic information received from said sensor module (claims 14 and 20); and a method for preventing a plurality of electronic devices from being pulled out of an equipment rack simultaneously being disclosed in the specification (sensors coupled to slide rails shown in fig. 6) (claims 1-7).

Response to Arguments

3. Applicant's arguments filed 6/6/05 have been fully considered but they are not persuasive. Regarding claims 1, 8 and 15, Applicants argue, "Dang is silent with regard to reducing the chances that an equipment rack will tip over". It has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. *Ex parte Masham*, 2 USPQ2d 1647 (1987).

Conclusion

Art Unit: 2835

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Correspondence

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yean-Hsi Chang whose telephone number is (571) 272-2038. The examiner can normally be reached on 07:30 - 16:00, Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the Art Unit phone number is (571) 272-2800, ext. 35. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained
